INSTRUCTIONS FOR PERSONS EXPOSED TO SARS-COV-2 INFECTION

Within the period of 14 days from the exposure to the SARS-CoV-2 virus infection, avoid all unnecessary contacts with other people. This applies specially to contacts with older people, those with chronic diseases and those who have a weakened immune system (people with cardiovascular diseases, respiratory diseases, diabetes, impaired kidney function, cancer treatment, etc.). They are at higher risk of a more severe course of the disease.

In the 14-day period monitor your health status closely. If you develop signs or symptoms of COVID-19 (such as malaise, cold, cough, fever, shortness of breath, headache, muscular pain, loss of taste or smell, sore throat, etc.) within this period, stay at home and contact your personal or emergency physician for further instructions.

Follow guidelines for preventing the spread of SARS-CoV-2 infection:

- Avoid all unnecessary contacts with people.
- Keep at least 2-meter distance from other people.
- Do not touch eyes, nose and mouth.
- Wash your hands regularly with soap and water.
- When water and soap are unavailable, use a dedicated hand sanitizer to disinfect your hands. Hand sanitizers are for external use only. Surface cleaners/disinfectants are not suitable for cleaning/disinfecting the skin.
- We recommend the use of mask in accordance with the Recommendations for the Use of masks during the spread of SARS-CoV-2 infections.
- Provide regular ventilation of enclosed spaces.
- Employees should work from home in agreement with the employer (if the nature of their work allows this) or discuss on whether their work can be organized in such a way that the possible infection cannot be transmitted to other employees during work and during arrival to and leaving from work.

If you have been in high-risk close contact* with a person with confirmed COVID-19 infection, we recommend you follow the instructions for persons in home quarantine, which are available on NIJZ website: [https://www.nijz.si/izolacija](https://www.nijz.si/izolacija). Please fill in the Statement on acquaintance with referral to quarantine at home via the website: [www.nijz.si/karantena](http://www.nijz.si/karantena).

Quarantine is not required for persons who have recovered from COVID-19 infection and less than 6 months (180 days) have elapsed since the onset of the disease (or since the positive test result for SARS-CoV-2 infection if the person was asymptomatic). For persons who have been vaccinated against COVID-19, quarantine is not required since the establishment of COVID-19 protection. Additional information on quarantine exemptions is available on: [www.nijz.si/izolacija](http://www.nijz.si/izolacija).

Persons who have recovered from the infection and those who have been vaccinated should nevertheless follow all the other instructions mentioned above.

* The definition of a high-risk close contact:
  - persons, living in joint household with a COVID-19 patient;
  - direct contact at less than 2 metres for more than 15 minutes;
  - other physical contacts or contacts with secretions (handshaking, hugging, use of common objects);
  - staying indoors for more than 15 minutes (joint household, office, waiting room in a medical institution, joint lunch, socializing at the same desk/table, etc.);
  - travelling in the same vehicle at less than 2 metres.

We advise you to install #OstaniZdrav application on your mobile phone.

If you are in distress and would like to talk to someone, call the 24-hour toll free number at 080 51 00 for psychological support in the COVID-19 epidemic.
