3. SPREMLJANJE GIBANJA NALEZLJIVIH BOLEZNI / COMMUNICABLE DISEASE SURVEILLANCE

Zakonska osnova: Zakon o nalezljivih boleznih - ZNB (Ur.l.RS št 33/06) opredeljuje nalezljive bolezni, za katere je v Sloveniji prijava obvezna. Prijava poteka skladno s Pravilnikom o prijavi nalezljivih bolezni in posebnih ukrepih za njihovo preprečevanje in obvladovanje (Ur.l.RS št. 16/99) in zajema nabor podatkov, opredeljen z Zakonom o zbirkah podatkov s področja zdravstvenega varstva (Ur.l. RS št. 65/00).

Viri podatkov: zdravniki, laboratoriji so v skladu z ZNB dolžni prijavljati nalezljive bolezni. Nalezljive bolezni prijavljajo na Obr 8,163 DZS. Prijave nalezljivih bolezni sistematično zbirajo območni zavodi za zdravstveno varstvo, ki jih s pomočjo nacionalnega računalniškega programa Survival analizirajo in pošiljajo v Center za nalezljive bolezni na Inštitutu za varovanje zdravja, kjer se zberejo podatki za vso Slovenijo. Podatki se analizirajo, evalvirajo, pripravljajo se mesečna poročila in letno poročilo o gibanju nalezljivih bolezni in njihovih epidemioloških značilnostih. Nekatere bolezni se poleg sistematičnega spremljanja dodatno spremljajo tudi z laboratorijsko podprtimi občutljivimi sistemi, ki omogočajo pridobitev dodatnih informacij, potrebnih za oblikovanje programov za obvladovanje nalezljivih bolezni in za vrednotenje njihove učinkovitosti.

Podatki o okužbi z virusom HIV oz. aidsu in drugih spolno prenosljivih okužbah (SPO) se zbirajo ločeno od ostalih nalezljivih bolezni, z drugačnim naborom podatkov. Zdravniki pošiljajo podatke na vprašalnikih, kjer so osebni podatki spremenjeni v skladu s Soundex šifrantom.

Kljub zakonski obveznosti je prijavljenih le del nalezljivih bolezni. Pomanjkljivo prijavljajo nalezljive bolezni tudi mikrobiološki laboratoriji in oddelki bolnišnic, ki se ne ukvarjajo z nalezljivimi boleznimi. Oceniti, kolikšen delež nalezljivih bolezni ostane neprijavljen, je težko in je v veliki meri odvisno tudi od diagnoze. Oceno dejanske epidemiološke situacije bi lahko dobili iz raziskav bremena okužb za posamezne nalezljive bolezni. Prijava nalezljivih bolezni je verjetno sorazmerno dobra za bolezni iz prve skupine Pravilnika o prijavi, ki zajema gnojne meningitise, ošpice itd., nadalje resnejše bolezni s hujšim potekom, redke bolezni in bolezni, ki jih spremljamo aktivno.

Definicije nalezljivih bolezni: so v skladu z Odločbo EU št. 2000/96/EC

V razpredelnicah so prikazane prijavljene nalezljive bolezni po nekaterih epidemioloških značilnostih. Celokupno število prijavljenih nalezljivih bolezni se v Sloveniji v zadnjih letih pomembneje ne spreminja. Leta 2008 je bila prijavna incidenca nalezljivih bolezni 3342,1 na 100.000 prebivalcev (2,7% več oz. 1782 primerov na 100.000 prebivalcev več, kot v letu 2007). Med prijavljenimi boleznimi prevladujejo gastroenterokolitisi neznane etiologije, norice, akutni tonzilitis, virusne črevesne bolezni, lymška borelijoza in škrlatinka. Zaradi nalezljivih bolezni je umrlo 135 ljudi, največ zaradi pljučnice in sepse nedoločenih povzročiteljev. Prijavljenih je bilo 47 izbruhov nalezljivih bolezni (leta 2007 49), med katerimi so bile najpogostejše okužbe s kontaktnim prenosom in okužbe s hrano. Epidemiološka situacija nalezljivih bolezni v letu 2008 v Sloveniji je bila sorazmerno ugodna.

COMMUNICABLE DISEASE SURVEILLANCE

Legal base: In Slovenia there is legal requirement to report communicable diseases, which are defined by the Law on Communicable Diseases, (Official Gazette 33/2006). The notification system is also based on the Act on Communicable Disease Notification, Monitoring and Control (Official Gazette 16/1999) and on the Law on Health Care Databases(Official Gazette(65/2000).

Database: according to the Law GPs, doctors, laboratories are obliged to notify infectious diseases. Infectious diseases are notified on form number 8,163 DZS. Statistics on communicable diseases are systematically collected and analysed by the Regional Institutes of Public Health and submitted to the Communicable Diseases Centre at the Institute of Public Health of the Republic of Slovenia, where statistics at the national level are compiled. The data are first checked, analysed and evaluated and then monthly reports and an annual report on the incidence and epidemiological characteristics of communicable diseases in Slovenia are prepared. In addition to systematic surveillance, some diseases are monitored with sensitive laboratory-based investigative systems in order to obtain the necessary information for developing communicable diseases control programmes and to evaluate the effectiveness of these programmes.

Statistics on HIV/aids and other sexually transmitted infections (STI) are compiled separately from other communicable diseases, using a different set of variables. Doctors send data on questionnaires, personal data are coded according to Soundex system.

Despite compulsory notification, there is still a problem of underreporting of communicable diseases. The notification of communicable diseases by microbiological laboratories and some hospitals is still very incomplete. When it comes to serious diseases, however, it is estimated that notification is quite good. The real burden of communicable diseases could be estimated in burden studies.

Definitions of communicable diseases: are according to Decision EU number 2000/96/EC.

Tables: reported communicable diseases are presented in tabular form in terms of specific epidemiological characteristics. There has been no significant change in the number of reported diseases in the past few years. The incidence in 2008 was 3342,1 cases per 100,000 inhabitants (in year 2007 2,7% less or 1782 / 100000 inhabitants). Gastroenterocolitis, varicella, acute tonsillitis, viral intestinal diseases, lyme borreliosis and scarlatina account for the highest proportion of reported diseases. In 2008, 135 patients died due to communicable diseases, mostly caused by pneumonia and sepsis of unknown origin. 47 outbreaks of communicable diseases were reported, in year 2007 49. The most frequent among them were contact outbreaks and food-borne disease outbreaks. In general, it is estimated that the epidemiological situation of communicable diseases in Slovenia in 2008 was relatively favourable.
