## 13. BOLNIŠNIČNA DEJAVNOST / HOSPITAL SERVICES

### Viri in metode zbiranja podatkov:

Bolnišnično dejavnost je v letu 2008 izvajalo 29 izvajalcev, med temi 3 zasebni in 26 javnih. Posredovali so dve vrsti podatkov:

**1) Zbirna poročila o svojem delu** pošiljajo bolnišnice območnim zavodom za zdravstveno varstvo, ki jih nato posredujejo Inštitutu za varovanje zdravja RS. Poročale so vse bolnišnice.

Poročila o delu stacionarnega zavoda (obr. štev. 3-21-60) so polletna in letna, vsebujejo pa podatke:

A/ - o organizacijskih enotah,

- o zdravstvenih in drugih delavcih,
- o številu bolniških postelj,

B/ - o številu bolniških dni ter

- o gibanju vseh obravnavanih oseb v koledarskem letu skupno za področja:
  - bolezni,
  - poškodbe,
  - zastrupitve,
  - porode,
  - fetalne smrti in
  - medicinsko rehabilitacijo.

**2) Zapise o posamezni bolnišnični obravnavi** smo z letom 1997 začeli zbirati po novi metodologiji. Nova vsebina zapisa je bila usklajena z zahtevami Svetovne zdravstvene organizacije in Evropske unije, hkrati pa smo poenotili skupne podatke pri posameznih vrstah bolnišničnih obravnav v skladu z zahtevami Zakona o zbirkah podatkov s področja zdravstvenega varstva glede zagotavljanja elementov enotnosti zdravstvenega informacijskega sistema v Republiki Sloveniji (Ur.l. 65/2000, 8093-8129) in v skladu z zahtevo Ministrstva za zdravje po poenotenju spremljanja bolnišničnih obravnav. Osnovna enota je postala epizoda.

Bolnišnice pošiljajo podatke o zaključenih bolnišničnih epizodah neposredno na Inštitut za varovanje zdravja RS dvakrat letno.

Zapis za epizodo je opredeljen v metodoloških navodilih za spremljanje bolnišničnih obravnav s seznamom *podatkov (Zdravstveni informacijski sistem bolnišničnih obravnav - Spremljanje bolnišničnih obravnav. I.del: Definicije in metodološka navodila za leto 2007, Ljubljana: Inštitut za varovanje zdravja RS, november 2006).*

Če je imela oseba več kot en zapis (kar pomeni več kot eno epizodo) v okviru ene bolnišnične obravnave, smo le-te zaradi poročevalskih potreb nato na Inštitutu za varovanje zdravja RS združili za različne prikaze (gl. razlago v uvodu naslednjega poglavja).

### **HOSPITAL SERVICES**

#### **Sources and methods of data collection**

*Hospital treatment has been provided by 29 hospitals, 3 private and 26 public.*

*From all hospitals in Slovenia aggregated reports on their services (Form 3-21-60) were sent to regional public health institutes and then to the Institute of Public Health of the Republic of Slovenia. These semiannually reports provide information on organisational units, health care and other staff, bed capacity, number of hospital days, and the number of patients receiving various in-patient services for diseases, injuries, poisonings, deliveries, foetal deaths and for all types of treatments within the framework of medical rehabilitation.*

#### **Definicije za poglavja 13, 13A in 13B / Definitions (Chapters 13, 13A and 13B):**

**Bolniška postelja** je redno vzdrževana in oskrbovana postelja za namestitev in 24-urno oskrbo in nego hospitaliziranih oseb in je nameščena na bolniškem oddelku ali v drugem prostoru bolnišnice, kjer je hospitaliziranim zagotovljena nepretrgana medicinska oskrba.

**Iz bolniških postelj so izključene:** postelje za novorojenčke brez patoloških stanj, dnevne postelje, provizorične in začasne postelje. Med bolniške postelje ne štejemo postelj za posebne namene, npr. za dializo, posebne postelje v porodništvu, in postelje, ki spadajo k posebnim medicinskim napravam.

**Hospital bed** is a regularly maintained and cared for bed for the placement, 24-hour care and treatment of hospitalised persons. It is located in a hospital ward, or some other area of the hospital, where hospitalised persons are provided with continuous medical care.

**Hospital beds do not include:** beds for treatment of newborns without disease or disorder, day beds, provisional and makeshift beds. Hospital beds also do not include special-purpose beds, e.g., for dialysis, special beds for obstetrics and beds integrated into special medical devices.

**Bolnišnica** je stacionarna ustanova, ki nudi 24-urno oskrbo in nego, diagnostiko, zdravljenje in rehabilitacijo oseb, običajno za bolezenska in kirurška stanja. V njej so zaposleni profesionalni zdravstveni delavci. Bolnišnica lahko izvaja storitve tudi ambulantno. Ločimo 3 tipe: splošne, specialne in univerzitetne bolnišnice.

**Splošna** bolnišnica je bolnišnica, ki nudi vrsto storitev osebam vseh starostnih skupin z različnim zdravstvenim stanjem, boleznijo ali prizadetostjo in ni univerzitetna bolnišnica.

**Specialna** bolnišnica je bolnišnica, v kateri so primarno hospitalizirane osebe s specifično boleznijo ali prizadetostjo enega organskega sistema, ali pa je namenjena za diagnostiko in zdravljenje bolezni in stanj pri osebah določene starostne skupine ali za diagnostiko in zdravljenje bolezni in stanj dolgotrajne narave.

**Univerzitetna oz. učna** bolnišnica (običajno s klinikami) je javna ali zasebna bolnišnica, ki izvaja tudi poučevanje zdravnikov. Povezana je z univerzo in zaposluje specialiste z osnovno specializacijo ali subspecializacijo.

**Hospital** is a stationary institution, providing 24-hour health care, diagnostics, treatment and rehabilitation to persons, usually for pathological and surgical conditions. It employs professional health-care workers. A hospital may perform services also on an outpatient basis. There are three types of hospitals: general, specialist and university hospitals.

**General hospital** is an institution providing a range of services to persons of all ages with different health conditions, illnesses or afflictions, and is not a university hospital.

**Specialist hospital** is an institution mostly treating persons with a specific illness or affliction of a single organ system, or is intended for diagnostics and treatment of an illness or condition in persons of a specific age group, or for diagnostics and treatment of long-term illnesses.

**University or educational hospital** (usually incorporating clinics) is a public or private hospital where the training of physicians also takes place. It is associated with a university and employs specialists with a main specialty or a subspecialty.

**Bolnišnična epizoda** je zdravstvena oskrba osebe v eni zdravstveni službi na eni lokaciji zaradi ene glavne diagnoze. Epizoda se torej prične v trenutku, ko osebo namestijo v posteljno enoto zdravstvene službe na eni lokaciji in se konča z odpustom iz bolnišnice, s premeščitvijo v posteljno enoto druge zdravstvene službe ali s smrtjo osebe. Izjemoma sta lahko v eni zdravstveni službi dve zaporedni bolnišnični epizodi, ko pride med hospitalizacijo zaradi patološke nosečnosti do poroda. Porod tako vedno pomeni novo bolnišnično epizodo.

**Hospital episode** means health care of a person by a single health care service at a single location, as a result of a single main diagnosis. An episode thus commences at the moment when the person is allocated a bed unit of a health care service at a single location and ends with the person's release from hospital, with relocation to a bed unit of another health service or with the patient's death. Exceptionally, two consecutive hospital episodes may occur within a single health care service, due to pathological pregnancy during hospitalisation leading to birth. Childbirth always denotes a new hospital episode.

**Bolnišnična obravnava** je skupen izraz za različne oblike obravnave v bolnišnični zdravstveni dejavnosti in pomeni skupek aktivnosti (opazovanje, diagnostika, zdravljenje in rehabilitacija), ki se nanašajo na zdravstveno oskrbo v stacionarni ustanovi (bolnišnici). Sem sodijo hospitalizacija, enodnevna obravnava, dolgotrajna dnevna obravnava in podaljšano bolnišnično zdravljenje.

**Hospital care** is a common expression denoting various forms of treatment in hospital-based health care activities and means the aggregate of activities (monitoring, diagnostics, treatment and rehabilitation), which refer to the health care treatment in a stationary institution (hospital). This includes hospitalisation, day care, long-term day care and extended hospital treatment.

**Dolgotrajna dnevna obravnava** (SZO: long-term day care, ZZS: dnevna bolnišnica) je zdravstvena oskrba osebe, ki s prekinitvami traja daljši čas, vendar vsakokrat neprekinjeno manj kot 24 ur in ne preko noči. Osebe lahko prihajajo na dnevno obravnavo v bolnišnico več dni zapored, lahko pa tudi s presledki enkrat ali večkrat tedensko, prespijo pa doma. Največ tovrstnih primerov se pojavlja v psihiatriji.

**Long-term day care** (SZO: long-term day care, ZZS: day hospital) means the health care of a person, lasting an extended period of time with intermissions, with each attendance spanning a continuous period of less than 24 hours without overnight stay. A person may receive day care in a hospital for several consecutive days, or, with intermissions, once or several times a week, but spend every night at home. The greatest number of such cases occurs in psychiatry.

**Dnevna obravnava** (SZO: day care, ZZS: enodnevna bolnišnica) je zdravstvena oskrba osebe, ki traja manj kot 24 ur in ne preko noči (izjema: diagnostika motenj spanja se šteje kot dnevna obravnava, čeprav je oseba v bolnišnici preko noči). Ob tem se zasedejo posebne postelje (postelje, kjer si opomorejo; postelje za posebne namene; postelje, ki so pridružene posebnim medicinskim napravam) ali redne bolniške postelje (v tem primeru to ni hospitalizacija in ta ležalna doba ni vključena v število bolniških oskrbnih dni).

**Day care** (SZO: day care, ZZS: day hospital) means the health care of a person, lasting less than 24 hours without overnight hospitalisation (exception: diagnosis of sleeping problems is considered day care, even though the person stays in hospital overnight.) In this case special beds are occupied (beds for recuperation; special-purpose beds; beds incorporated into special medical devices) or regular hospital beds (this is not considered hospitalisation and the bed time is not included in the number of days of hospital-based care).

**Glavna diagnoza** je diagnoza vodilne bolezni ali stanja, zaradi katerega je bila oseba sprejeta na obravnavo v bolnišnico.

**Main diagnosis** is a diagnosis of the main disease or condition due to which the person was admitted to hospital care.

**Diagnoza zunanjega vzroka** opredeljuje dogodek in okoliščine, zaradi katerih je prišlo do nastanka poškodbe, zastrupitve ali drugih škodljivih posledic.

**Diagnosis of external cause** defines the event and circumstances due to which injury, poisoning or other adverse consequences occurred.

**Glavna diagnoza v epizodi** je diagnoza vodilne bolezni ali stanja v epizodi, zaradi katerega je bila oseba na bolnišnični obravnavi. To je štirimestna šifra diagnoze po 10. reviziji MKB.

**Main diagnosis in an episode**: a diagnosis of the main disease or condition in an episode, due to which the person was admitted to hospital care. It is expressed in the form of a four-digit code of diagnosis according to the 10th revision of ICD.

**Hospitalizacija** je neprekinjena, več kot 24 ur (ali vsaj preko noči) trajajoča zdravstvena oskrba osebe v posteljni enoti bolnišnice. Začne se s sprejemom, nadaljuje z eno ali več epizodami in zaključi z odpustom. Izjemoma je hospitalizacija krajša kot 24 ur, če je bila oseba že prvi dan hospitalizacije premeščena v drugo bolnišnico ali če je v tem času umrla.

Pojasnilo: Hospitalizacija je pojem zdravstvene statistike, ki je namenjena primerjavam med bolnišnicami na krovni ravni. Definirana je z dvema ključnima dogodkoma, ki opisujeta stik med osebo in bolnišnico kot pravno osebo, tj. s sprejemom na zdravljenje v bolnišnici in z odpustom iz bolnišnice.

**Hospitalisation** means uninterrupted, more than 24-hour period (or at least overnight) health care of a person in a bed unit of a hospital. It commences with admission, continues with one or more episodes and ends with release from hospital. Exceptionally, hospitalisation may be shorter than 24 hours, if the person was relocated, already the first day of hospitalisation, to another hospital, or if the person has died in the meantime.

**Explanation**: Hospitalisation is a term of health care statistics, which is intended for comparisons between hospitals at the level of coverage. It is defined by two key events denoting the contact between the person and the hospital as a legal person, i.e., admission to hospital care and release from hospital.

**Intenzivna terapija** je stalna, neprekinjena diagnostična in terapevtska oskrba življenjsko ogrožene osebe, ki se izvaja v intenzivnih enotah z neprekinjeno prisotnostjo zdravnika.

**Intenzivna nega** je praviloma organizirana v okviru posamezne specialnosti, ločeno od intenzivnih enot, zdravljenje pa ne zahteva neprekinjene prisotnosti zdravnika.

**Intensive therapy** means continuous, uninterrupted diagnostic and therapeutic care of a person whose life is in danger, taking place in intensive care units in the continuous presence of a physician.

**Intensive care** is, as a rule, organised within the scope of individual specialties, separate from intensive care units, without the required presence of a physician.

**Odpust** je zaključek obdobja zdravstvene stacionarne oskrbe v eni bolnišnici, ne glede na to ali se oseba vrne na svoj dom, je premeščena ali umre.

**V število odpustov ni vključeno:**

- premostitev z enega oddelka na drugega v isti bolnišnici;
- kadar oseba začasno zapusti bolnišnico in je bolniška postelja zanj še vedno rezervirana (npr. izhodi ob koncu tedna).

**Release** means the end of a period of hospital-based care in a single hospital, regardless of whether the person returns home, is relocated or dies.

**The number of releases does not include:**

- relocation from one ward to another within the same hospital;
- when a person temporarily leaves the hospital, but the hospital bed remains reserved for the said person (e.g., weekend leave).

**Podaljšano bolnišnično zdravljenje** (PBZ) je bolnišnična obravnava, namenjena tistim osebam, ki po zaključeni diagnostični obravnavi in zastavljenem zdravljenju slednjega še ne morejo nadaljevati zunaj bolnišnice, ker bi prezgodnji odpust lahko povzročil pomembno poslabšanje bolezni ali stanja. PBZ lahko poteka v istem ali po premostitvi osebe v drugem zdravstvenem zavodu.

**Extended hospital care** means hospital care intended for those persons who, after completed diagnostic treatment and terminated health care, still cannot continue treatment outside the hospital, because release would cause significant deterioration of the disease or condition. Extended hospital care may take place in the same or in a different health care institution following relocation.

**Povprečna ležalna doba** je seštevek realiziranih bolniških dni v bolnišnici, deljen s številom hospitaliziranih oseb, v koledarskem letu. Pri številu oseb se upošteva začetno stanje in sprejete v bolnišnico med letom. Dan sprejema in dan odpusta se šteje kot en bolniški dan.

Vir podatkov je Poročilo o delu stacionarnega zavoda (Obr. 3-21-60).

**Average length of stay** is the sum of hospital days actually spent in a hospital, divided by the number of hospitalised persons in a calendar year. The initial status and admission to hospital during the year are taken into account in the number of persons. The day of admission and the day of release count for a single hospital day.

Source of information: Treating Institute Report (Form 3-21-60).

**Povprečno trajanje hospitalizacije** je seštevek vseh trajanj hospitalizacije pri hospitaliziranih zaradi posamezne bolezni ali stanja (ene glavne diagnoze po MKB), deljen s številom hospitalizacij (odpustov) zaradi te bolezni ali stanja v koledarskem letu.

Vir podatkov je Podatkovna zbirka o bolnišničnih obravnavah IVZ RS.

**Mean length of hospitalisation** is the sum of all periods of hospitalisation due to individual disease or condition (one main diagnosis according to ICD), divided by the number of hospitalisations (releases), due to disease or condition, in a calendar year.

Source of information: Database on hospital-based health care of the Institute of Public Health.

**Sprejem** je namestitve bolnika v posteljni enoti bolnišnice, praviloma za več kot 24 ur oziroma vsaj za eno noč, v primeru smrti ali premostitve v drugo zdravstveno ustanovo lahko za manj kot 24 ur. Te primere beležimo kot enodnevene hospitalizacije (trajanje hospitalizacije je en dan).

**Admission** is the placement of a patient in a hospital bed unit, usually for more than 24 hours, or at least overnight. In the event of death or relocation to another health care institution, this can be less than 24 hours. These cases are recorded as day hospitalisations (duration of hospitalisation is one day).

**Ponovni sprejem** je ponovni sprejem bolnika v isti bolnišnici zaradi iste bolezni, poškodbe, zastrupitve ali zaradi posledic te bolezni ali stanja. Posebej beležimo ponovni sprejem v enem letu po prvi hospitalizaciji in ponovni sprejem več kot eno leto po prvi hospitalizaciji.

**Readmission** is a repeat admission of a patient in the same hospital for the same disease, injury, poisoning or due to the consequences of the said disease or condition. A separate record is kept of admissions within one year after the first hospitalisation and of readmissions occurring more than one year after first hospitalisation.

**Trajanje hospitalizacije** je seštevek trajanja zaporednih epizod pri isti osebi v eni bolnišnici (v dnevih). Če se je oseba zdravila v posteljni enoti samo ene zdravstvene službe, je trajanje epizode enako trajanju hospitalizacije.

**Duration of hospitalisation** is the sum of all periods of consecutive episodes of the same person in a single hospital (in days). If a person received care in a bed unit of a single health care service, the period of the episode is equal to the duration of hospitalisation.

**Zdravstvena oskrba** so vse aktivnosti, ki jih izvajajo zdravniki in drugo zdravstveno osebje pri diagnostiki, zdravljenju, rehabilitaciji in sledenju bolnikov.

**Health care** means all activities, which physicians and other health care staff perform during the diagnosis, treatment, rehabilitation and surveillance of patients.

**Zdravstvena služba** je področje zdravstvene dejavnosti, ki jo izvajajo organizacijske enote zavodov in zasebnih zdravstvenih delavcev. Zdravstvene službe se uporabljajo za spremljanje zdravstvene dejavnosti na državni ravni (na IVZ jih »prelivamo« v specialnosti).

**Health care service** means the scope of health care activities performed by organisational units of institutions and private health care workers. Health care services are used for monitoring health care activities at the national level (at the Institute of Public Health these are transformed into specialties).

**Združevanje epizod (agregacija):** je postopek združevanja posameznih zapisov (epizod), kjer je vrsta obravnave hospitalizacija. Epizode združujemo:

**a) po hospitalizacijah** (v nov zapis se združujejo vse epizode ene osebe v eni bolnišnici v času ene hospitalizacije, pri čemer je zabeležena kot glavna diagnoza le-ta iz prve epizode),

**b) po specialnostih** (vse epizode pri eni osebi v eni bolnišnici v okviru ene hospitalizacije v lečečih organizacijskih enotah ene specialnosti) in

**c) po diagnozah**, ki prikazujejo bolnišnične obravnave ene osebe v eni bolnišnici v lečečih organizacijskih enotah z isto glavno diagnozo.

Če je imela oseba več epizod in glavna diagnoza ni bila v vseh epizodah enaka, je oseba v tej zbirki bolnišničnih obravnav večkrat prikazana. Zato je število epizod, združenih po diagnozah, običajno večje od števila hospitalizacij. Podobno pa tudi število hospitalizacij ni nujno enako vsoti števila bolnišničnih obravnav v okviru posameznih specialnosti.

**Aggregation of episodes** is the procedure of aggregating individual records (episodes) where the type of care is hospitalisation. Episodes are aggregated as follows:

**a) by hospitalisation** (a new record contains aggregate episodes of a single person in a single hospital during a single hospitalisation, whereby the diagnosis of the first episode is recorded as the main diagnosis.)

**b) by specialty** (all episodes of a single person in a single hospital within the scope of a single hospitalisation in the treating organisational unit of a single specialty) and

**c) by diagnosis**, representing the hospital care of a single person in a single hospital within the scope of a single hospitalisation in the treating organisational unit and with the same main diagnosis.

If a person was delivered more than one episode and the main diagnosis was not the same in all episodes, that person is accounted for more than once in these aggregate hospital treatments - thus the number of episodes, aggregated by diagnosis, is usually greater than the number of hospitalisations.

Similarly, the number of hospitalisations is not necessarily the same as the sum of all hospital treatments within a given specialty.
